

# MDM Solutions

Help your customers create secure and productive work environments with full-service, hosted Mobile Device Management products

**Inquire about our agent and reseller programs for these products.**

## Don't Sacrifice Security for Mobility

Being mobile today has become an essential part of conducting business for your customers. Employees need to stay constantly connected, with access to their work anytime, anywhere.

With Bring-Your-Own-Device (BYOD) programs on the rise in the workplace, organizations are facing the difficult dilemma of allowing employees the freedom to use their own devices while still keeping valuable data and information secure. The benefits of BYOD programs can be significant with increases in employee productivity and efficiency, but organizations need solutions that allow them to manage regulatory compliance for their mobile devices while protecting themselves against possible security breaches. Through CloudScale365's MDM platform, you can help your customers maintain the secure and productive work environment they need to succeed.

## Mobile Device Manager Overview

CloudScale365's Mobile Device Manager (MDM) is a mobility management solution that allows companies to take control of the devices that are accessing their network and carrying private company information. Through a single console businesses can manage devices, enforce and push policies, receive alerts of possible threats, manage a device's applications and content and have the ability to perform a remote wipe of a device. With support across multiple OS platforms including iOS, Android, Windows Mobile and BlackBerry, employees are able to work from the device of their choice without leaving their company vulnerable.

## Key Benefits:

- Manage devices used in the workplace and secure and control corporate data
- Multiple OS platform support including iOS, Android, Windows Mobile, and BlackBerry

## Contact Us

## MDM

- Manage all company devices through a single management portal
- Satisfy employee needs and boost productivity, enabling each employee to choose a company provided device or use their own device
- Help customers enable and support a BYOD program
- Help customers adhere to compliance policies
- Provide a simple deployment process

### Key Features:

- Cross-platform solution: Deploy, manage, secure and monitor all of the organization's devices with support for iOS, Android, Windows Mobile, and BlackBerry OS platforms.
- Highly scalable: CloudScale365's MDM solution grows with your customer and is completely scalable; supports unlimited number of devices and mobile data.
- Secure role-based access: Integrates with enterprise Directory Services to customize and limit the users' role. Provides detailed audit trail of users accessing the system as well as the events and actions taking place.
- Intelligent notifications: Reporting notification alerts may be sent via email, text or dashboard message.
- Mobile telecom management: Enables companies to monitor and reduce mobile expenses with alerts of roaming status across devices.
- Web-based console: Manage company devices through a simple and intuitive web-based console.
- Enterprise app catalog: Deploy and manage internal or public applications.
- Enterprise integration: Integrates with current enterprise systems to utilize existing user and device data.
- Robust reporting: Allows companies to choose or customize from over 100+ detailed reports to monitor the organization's data.
