

SHAREPOINT

SharePoint

Offer your customers simplified collaboration and increased productivity

With SharePoint your customers can engage with people, share ideas and reinvent the way they work together. CloudScale365's Hosted SharePoint collaboration service offers an easy migration path for moving your company's SharePoint infrastructure into the cloud. With the added benefits of upgrading old systems and significant cost savings, CloudScale365's Hosted SharePoint can offer your customers a dynamic and powerful solution that empowers teams to work together. Whether employees are located in one particular region or they are spread out all over the world, SharePoint provides the collaboration tools necessary for working effectively and efficiently.

Key SharePoint Benefits

A single collaboration platform to manage and access corporate information in databases, reports and business applications

Your customers can easily utilize the SharePoint platform to consolidate intranet, extranet and internet sites. This can result in a substantial cost savings for the organization and also provides a more efficient method for accessing each of the sites. In addition to consolidating sites, SharePoint also works seamlessly with many technologies your customers already utilize such as MS Office and MS Exchange Server.

Native tools and components for creating do-it-yourself business solutions

SharePoint provides teams with all of the unique tools they need to work at maximum efficiency. Through SharePoint, organizations have the option to keep features as they come or build custom applications and components with ease. With this flexibility teams are able to easily access the specific tools they need to do their jobs effectively.

Built-in compliance measures

The SharePoint platform offers organizations the ability to protect the integrity of their data from unauthorized use. This includes managing permissions to sites, lists, folders, documents, web applications and more. In addition, security measures can be implemented at both the document and item level.

Contact Us

Contact CloudScale365 to discuss how you can begin offering Microsoft SharePoint to your customers today. A Channel/Reseller program is available for qualified affiliates. To learn more:

SHAREPOINT

Familiar, easy to use interface

SharePoint has features and tools that allow organizations to respond quickly to business needs and build solutions without having a background in web development. Whether you need to build or update your website or create a specific online tool for your team, SharePoint has the tools available to help.

Centralized Administration

Through SharePoint's Central Administration (CA) Console, your customers can easily access application management features, system settings, monitor SharePoint farms, perform backups & restorations, manage security settings, upgrade SharePoint, change general application settings and use configuration wizards all in a single location.

Standard Features

- Business Connectivity Services
- Configuration Wizards
- Connections to Office Communication Server and Exchange
- Discussion Boards
- Mobile Connectivity
- Cross-Browser Support
- Streamlined Central Administration
- Usage Reporting and Logging
- Browser-based Customization

Additional Capabilities

CloudScale365 offers a wide-range of add-on capabilities to maximize SharePoint functionality. Security enhancements like a SharePoint SSL certificate provide an additional level of safety for your customer's data. Personalized URLs are also available which may be of particular interest to customers developing a public-facing site. In addition, CloudScale365 supports Office Web Apps-- browser-based versions of the Microsoft Office suite that can allow your customers the ability to securely create, edit and share documents from within SharePoint, wherever they are accessing the system.
